

## **Ethics & Code of Conduct 2016-2017**

Name (printed): \_\_\_\_\_

The material presented in CSIS Networking & Security courses is designed to give you a 'real-life' look at the use of various tools and systems that are at the heart of every network security analyst's or administrator's daily responsibilities. Through use of this material, you will have access to software and techniques used every day by professionals. With this access come certain ethical responsibilities.

The hardware, software, tools, and applications presented and used in these courses are intended to be used for instructional and educational purposes only.

As a student, you are not to use these tools, applications, or techniques on live production IT infrastructures inside or outside George Fox University. Under no circumstances are you permitted to use these tools, applications, or techniques outside the scope of your assigned academic endeavors.

I understand that failure to comply with this code of conduct will result in failing the current CSIS Networking and/or Security course for which I am enrolled in addition to removal from my current major/program and possibly removal from the University.
